

FIREMAN SWITCH

• Facility interlocking on 'OFF' position

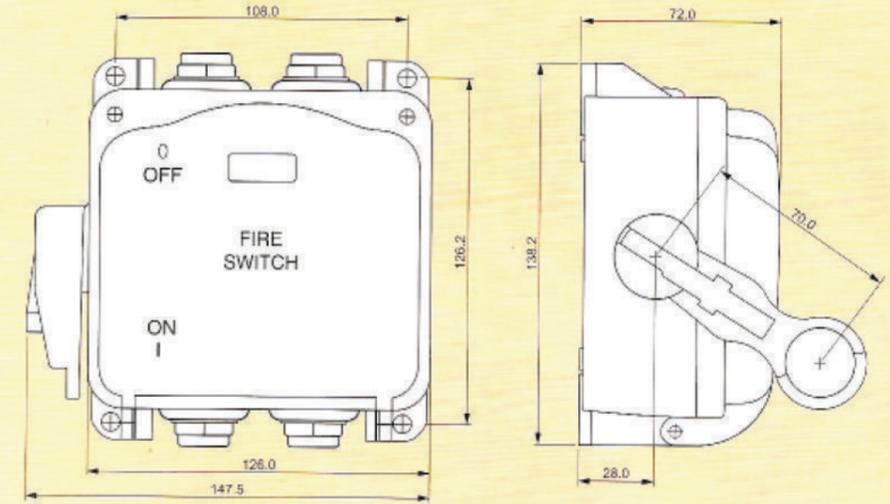

• Convenient to switch OFF by using a hooked pole through handle hole.

Weatherproof to IP65
Enclosure: Die Cast Aluminium

FIREMANSWITCH

Description

- Acting as weatherproof and fire resistance isolator. It is usually connected to activate the Shunt Trip Coil connected to MCCB, ACB or other devices to disconnect the power supply to the building or factory in case of fire.
- Acting as general weatherproof Isolator installed at a location that is convenient for the fireman to switch off the power supply in the event of fire or emergency.

Technical Data

- IEC 60947-3
- Rated Voltage 240V/415Va.c. 50hz
- Utilization Category : AC23A
- Die Cast Aluminium Enclosure
- Interlocking on OFF Position
- Cover can only be opened when switch is OFF
- Ingress Protection - IP65 (IEC529)

Connection

Conductors or cable entries from top or bottom
 size 2 x M20 from top
 2 x M20 from bottom
 max cable size 25sq. mm

Type Model no.	Description	Qty/Carfon	Weight/P'cs

Brand: Q&S or OEM
 Phase: 3 Phase & 1 Phase
 Voltage: 415 V & 240V; or Customized
 Frequency: 50-60 Hz
 Motor power: 1-20 HP

Q&S D.O.L Magnetic Starters are in full range as below:

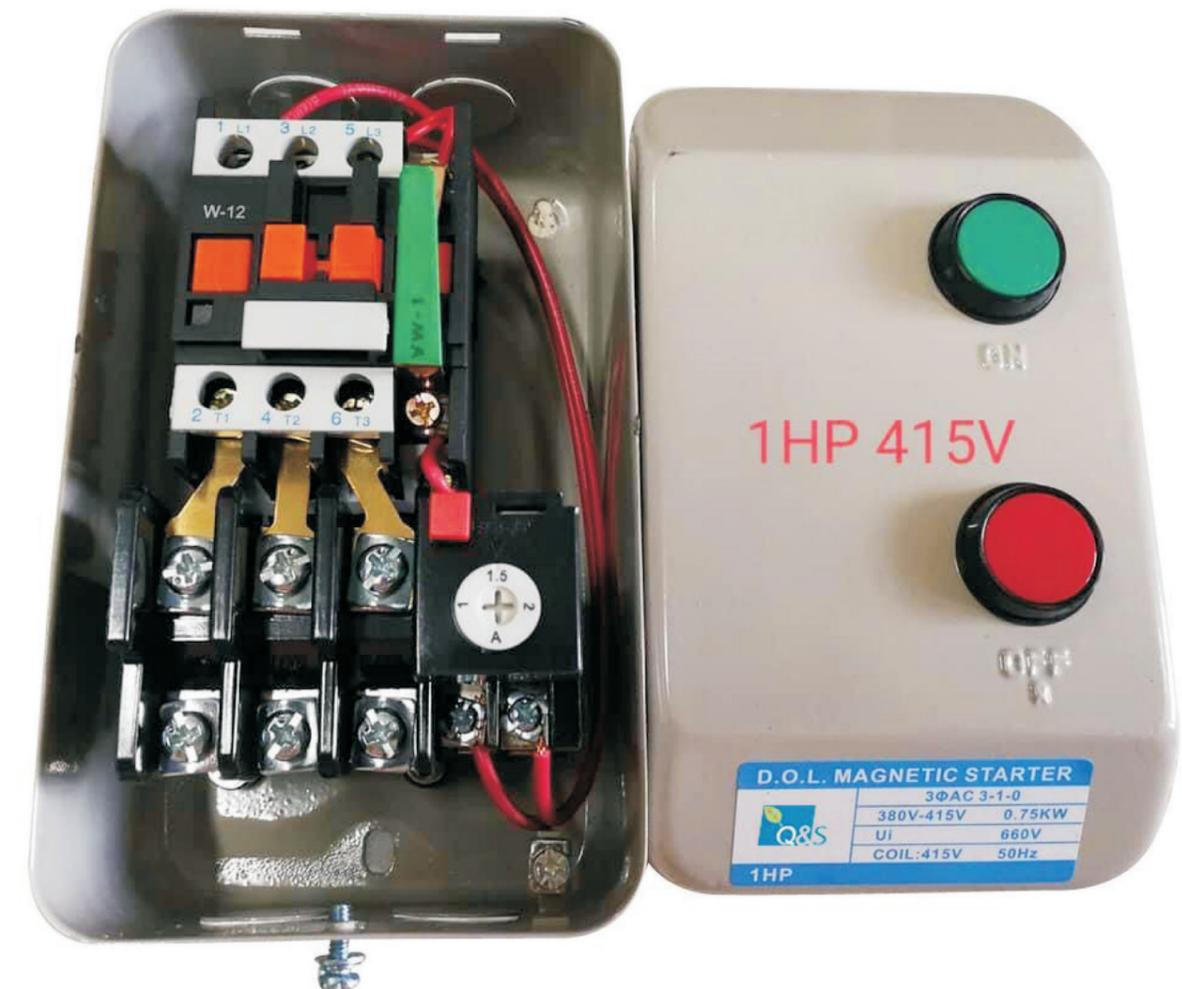

1HP, 3phase, 415V	1HP, 1phase, 240V
2HP, 3phase, 415V	2HP, 1phase, 240V
3HP, 3phase, 415V	3HP, 1phase, 240V
5HP, 3phase, 415V	5HP, 1phase, 240V
7.5HP, 3phase, 415V	
10HP, 3phase, 415V	
15HP, 3phase, 415V	
20HP, 3phase, 415V	

Specification:

Being one of the renowned organizations, we have been able to provide our precious clients a qualitative range of **Three Phase and Single Phase Starter Switch**. Our provided starter is manufactured by our accomplished professionals using finest quality components and ultra-modern technology. The offered is available in numerous dimensions as per the needs of our respected clients. Furthermore, this starter is highly urged and acknowledged by our patrons for its easy installation and durable finish.

Features:

1. Easy to install
2. Precise dimensions
3. Optimum finish
4. Thermal overload relay & magnetic contactor
5. Metal Box with powder coating

Q7 Series Magnetic Starter

CE IP55

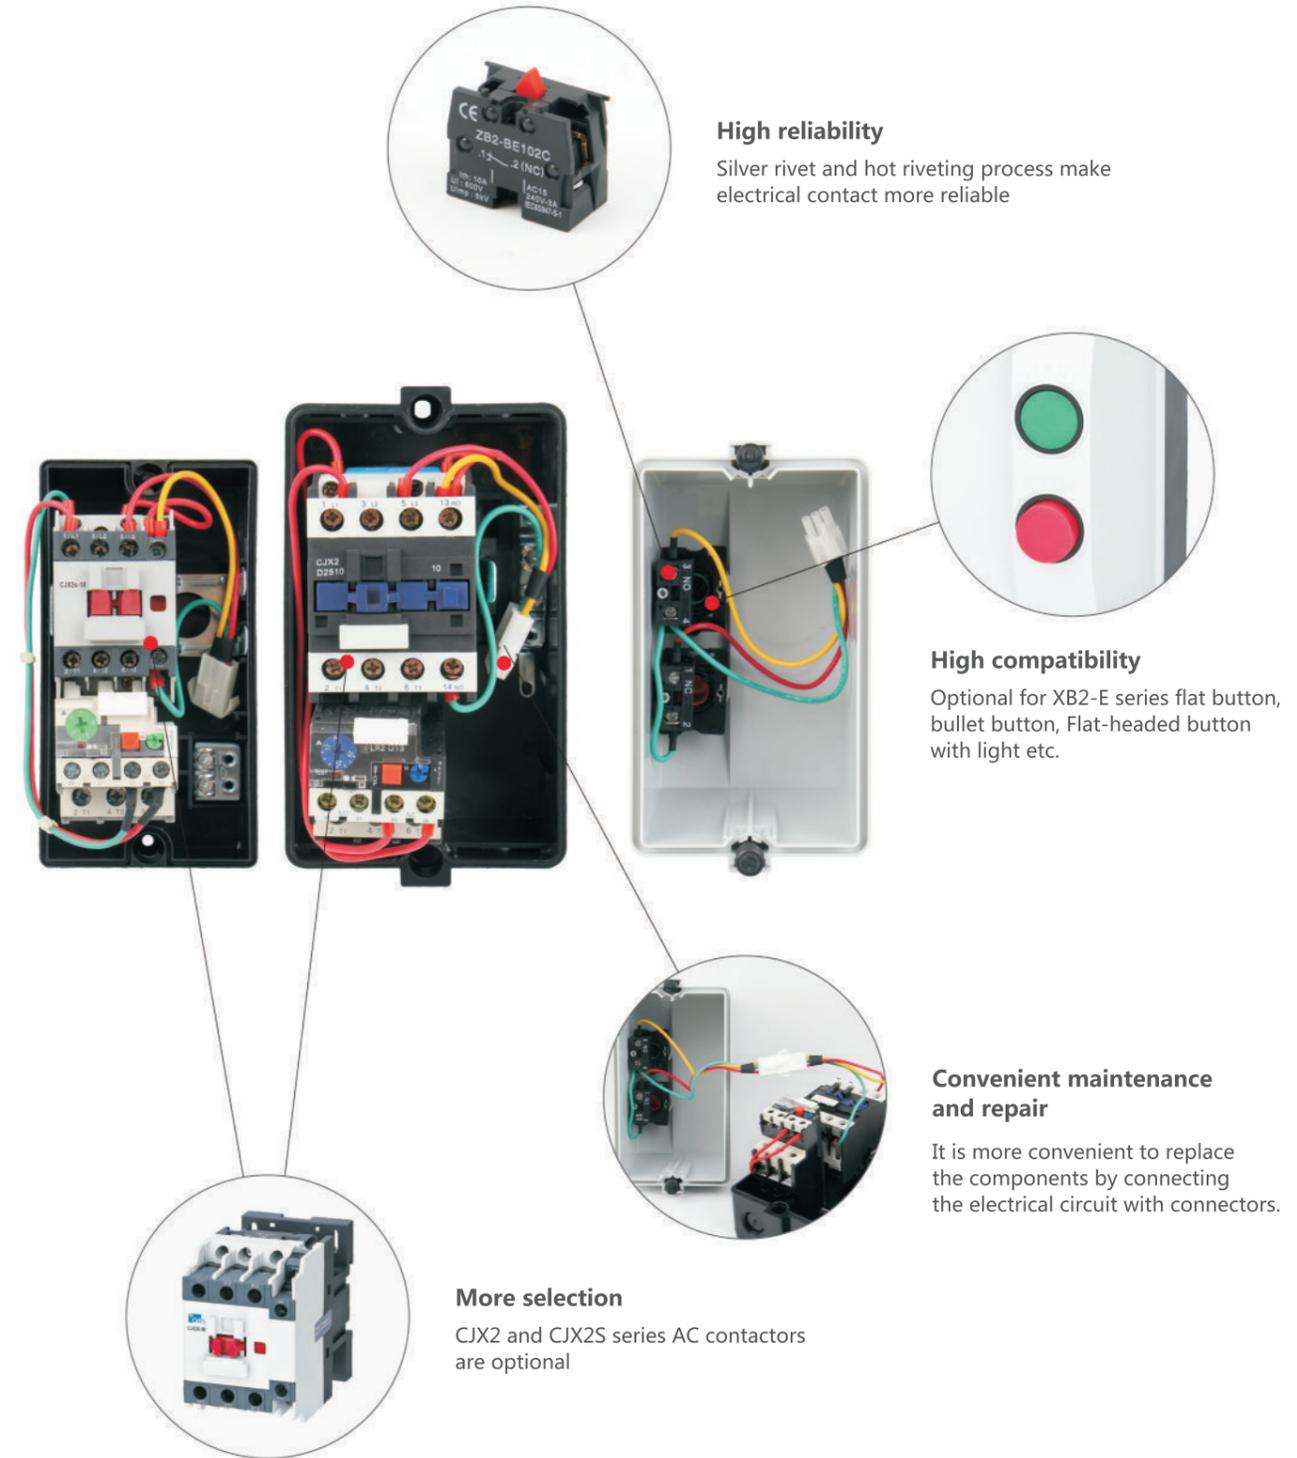

Protection degree: IP55
High compatibility and high reliability
Convenient maintenance and repair

Quality & Service creates value

Q7 <<
Magnetic Starter

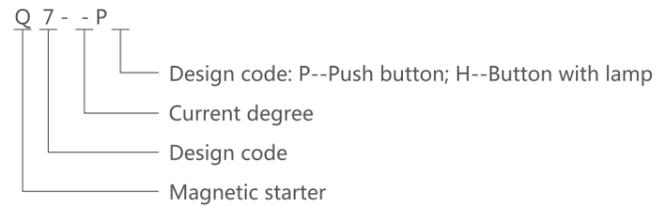

Product Structure Analysis Diagram

Scope of application

Q7 series magnetic starter is suitable for using in the circuits the rated voltage up to 660V, AC 50Hz or 60Hz, rated control power to 45kW and current to 95A. It is used to control the direct start and stop of the motor, and the starter with thermal overload relay protects the motor from overload and phase failure.
Standard: IEC/EN 60947-4-1.

Type Designation

Operation and Installation Condition

Altitude:2000m
Ambient air temperature:-5°C~+40°C, average temperature of 24 hours must below+35°C
Relative humidity: the maximum temperature of 40 degrees, the air relative humidity not exceed 50%, at a lower temperature can allow for a higher relative humidity. The wettest month's average lowest temperature must be below 25°C, the max relative humidity of that month should not exceed 90%. If humidity changes as a result of occasional gel generated, should eliminate it.
Installation position: The installation degree of the tilt and vertical plane should not exceed 5°
In a non-explosive hazardous medium, and there is no place in the medium that is sufficient to corrode metals and destroy insulation gases and conductor dust. Where there is rain and snow protection and there is no steam.
Shock vibration: Products should be installed and used without severe shake, shock and vibration of the place.

Specifications

Specifications for magnetic starter (sheet1)
Coil rated control power supply voltage U_s can be divided into AC 50Hz or 60Hz: 36V, 110V, 220V, 380V.
Operating condition: Coil pull-in voltage is (85%~110%) U_s ; Release voltage is (20%~75%) U_s .

Structural Features

The starter adopts a protective structure with a protective cover of IP55 and is internally composed of a CJX2 AC contactor and a JR28 thermal overload relay. The entry and exit wiring of the starter adopts the knockout type wiring hole, and the user can selectively knock and connect the four knockout holes according to the wiring requirements. The cover and the base of the starter can be completely separated, and the user is very convenient to install and maintain; the button adopts the XB2 series push button switch assembly to realize the start and stop of the starter, and it will be safe and reliable.
In order to improve the protective performance of the starter, the starter must be installed vertically. The mounting screws should be selected according to the size of the mounting hole. The screws should be no less than M5, and spring washers, flat washers and sealing rubber rings should be added to ensure the fastening of the starter. In addition, the knockout terminal holes should be equipped with corresponding waterproof terminals.

Overall and Mounting Dimensions

NEW PRODUCT

► **3 Advantages**
of CjX2S Series Contactor

**More auxiliary contacts,
meet various application requirements**

9-95A with 1NO+1NC auxiliary contact,
help customer to optimize inventory

**Suitable for larger voltage fluctuation to
ensure the stable operation of the equipment**

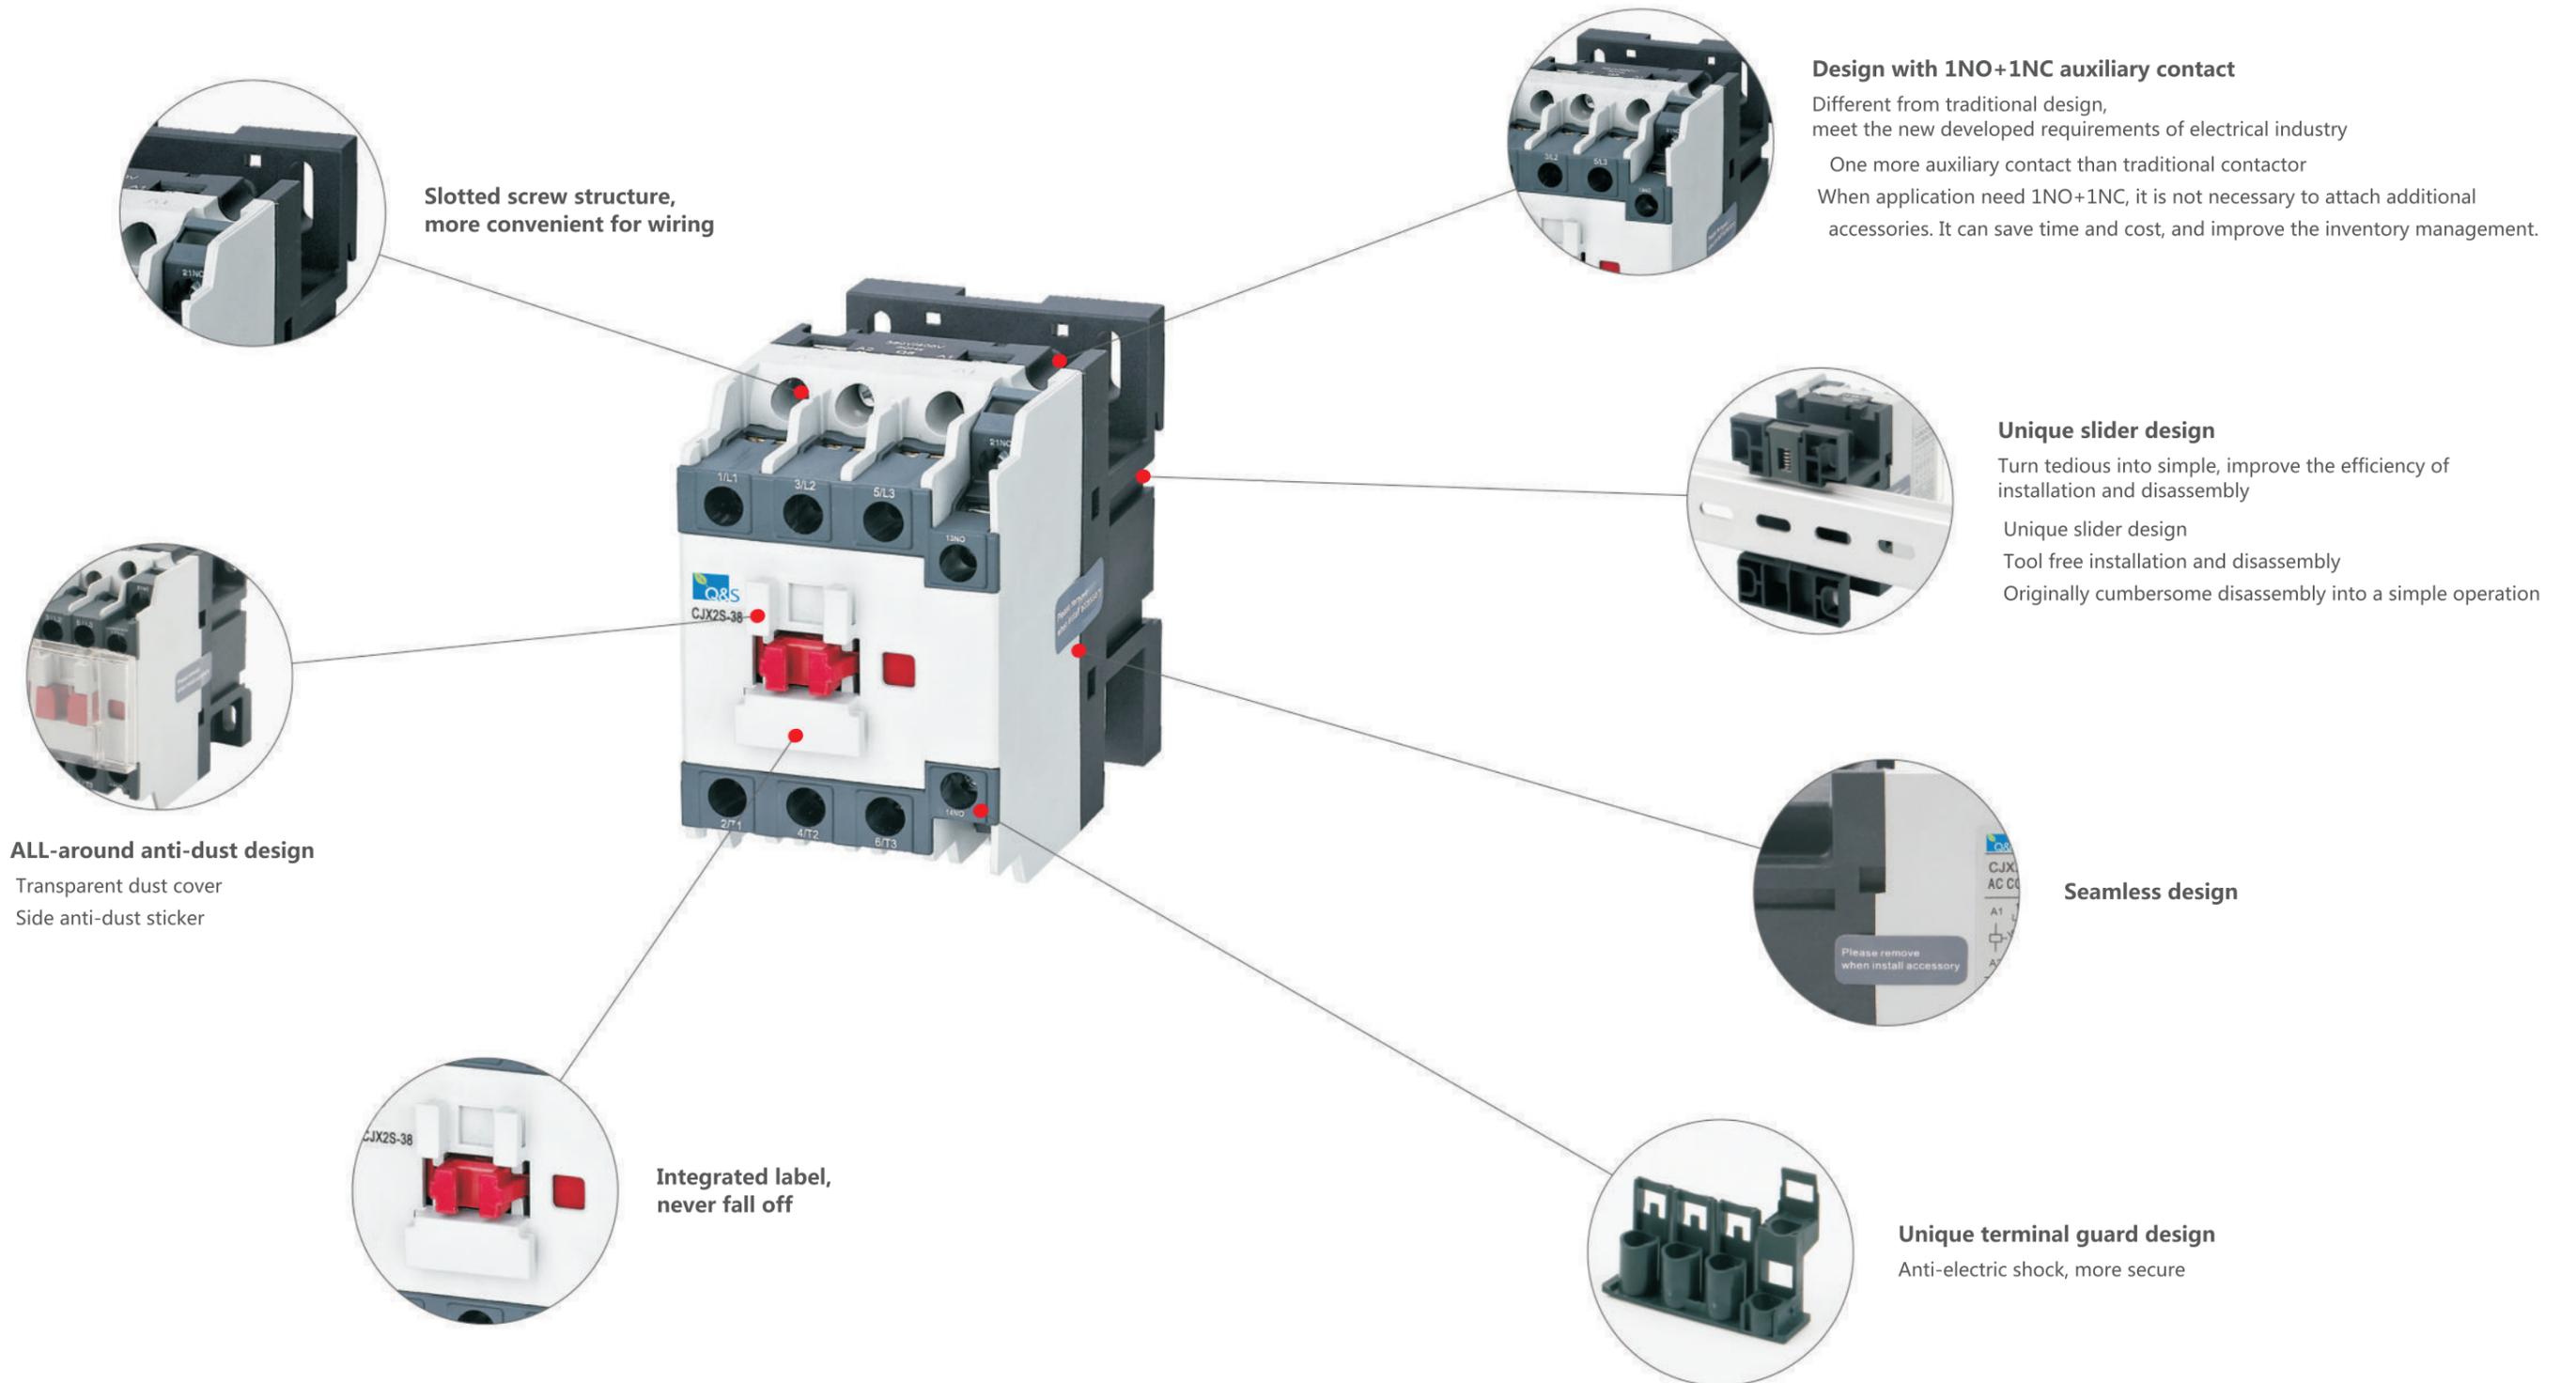

Suit for 70%--120% voltage range, effectively avoid
the impact of power grid voltage fluctuations, can operate
smoothly under peak electricity.

**Super environment adaptability, can be
reliable operation with extreme environment.**

The ambient temperature from -35 °C to 70 °C ,
meet the application requirements of
all kinds of occasions.

Product Structure Analysis Diagram

Product Overview

CJX2S series AC Contactor with novel appearance and compact structure is suitable for using starting & controlling the AC motor frequently, switching on and off the circuit at a long distance. It is used in combination with thermal relay to compose a magnetic motor starter.

Standard: IEC 60947-1, IEC 60947-4-1.

Specifications

- Rated operation current(Ie): 9-95A
- Rated operation voltage(Ue): 220V~690V
- Rated insulation voltage: 690V
- Poles: 3P
- Installation: Din rail and screw installation

Operating and Installation Conditions

Type	Operating and Installation Conditions
Installation category	III
Pollution level	3
Certification	CE, CB, CCC, TUV
Protection degree	CJX2S-09~38 IP20 CJX2S-40~95 IP10
Ambient temperature	limit of temperature: -35°C~+70°C, normal temperature: -5°C~+40°C The average no more than +35°C within 24 hours. If not in normal operating temperature range, please refer to "Instructions for abnormal environment"
Altitude	2000m
Ambient temperature	The maximum temperature of 70 degrees, the air relative humidity not exceed 50%, under lower temperature can allow for higher relative humidity. If the temperature is 20°C, the air relative humidity could up to 90%, Special measures should be taken for occasional condensation due to humidity changes.
Installation position	Inclination between installation surface and vertical surface should not exceed ±5°
Shock vibration	Products should be installed and used without significant shake, shock and vibration place.

Description

This Resin molded current transformer is of Donut type, used for current measurement of Ac circuit rated 50/60Hz and voltage 660V and below, The product is of resin-casting type with molded fixed mounting base plate.

This resin type current transformer provides an extensive range from 50A/5A up to 5000A/5A or secondary rated at 1A as per request. It is applicable for electric cable or busbar installations. It can withstand higher temperature as compare to conventional PVC encapsulated or tape wound current transformer.

Structure feature

Current transformer is made of high quality cold-rolled oriented silicon steel, the secondary coil (rated 5A mper or 1A) is made of heavy formex copper magnet wire, then insulated with high quality resin material to obtain higher insulation level and temperature tolerance.

Technical parameter

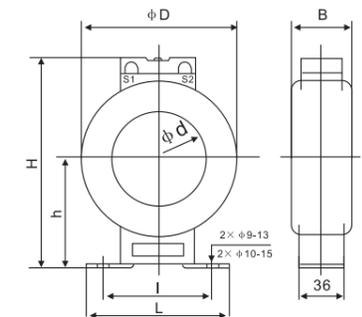

1. System voltage: 660VAC maximum
2. Test voltage: 2.5kV r.m.s for 1 minute
3. System frequency: 50/60Hz
4. Primary rating: 50-5000A
5. Secondary output: 5A is standard
6. Short circuit thermal: 5kV for 1 sec
7. Overload withstand: 1.2 times rated currents continuously
8. rated dynamic current: 7.5kA for 2 sec
9. Insulation class IEC85, BS2757: class E
10. Operating temperature: 40°C to 85°C
11. Humidity: up to 95% RH (non condensing)
12. Enclosure: flame retardant
13. Comply with: IEC-60094-1

Applications

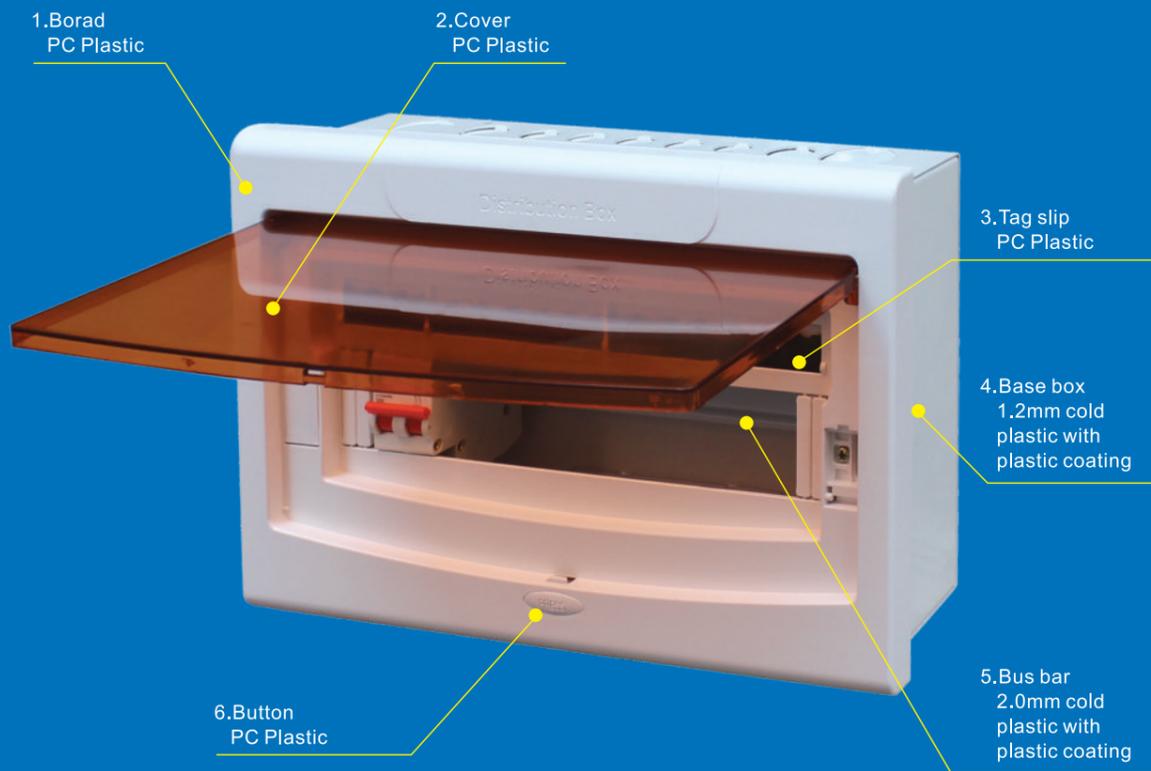

1. AC current measurement with AC ammeter, Demand meter, PF meter, KW meter, Kwhr meter (Sub-metering), current transducer, digital measuring instruments.
2. Applicable to general switchgear and marine switchgear installations.
3. Applicable to analog and digital types of overcurrent relays.
4. Applicable to electronic type of motor protection relays.
5. Applicable to inverter and soft starter for c.t. ratio.

Description of Product Material

12 way

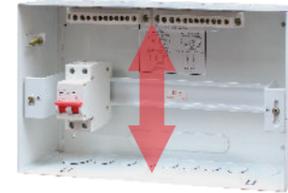

24 way

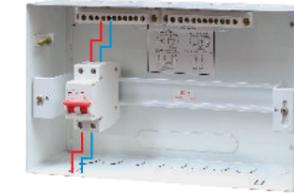

32 way

Six Innovated Functions

1. Large Space

Its larger space for hiding wires makes wiring inside of the box easy and keeps wires from each other at a safe distance.

2. Easy Wiring

Movable guide rail plate can be put out of the box for wiring, unlimited by the space within the box. The panel can be adjusted to a level position with an ellipse hole in the guide rail plate, which better its appearance.

3. Easy Adjustment

Innovated function of adjustment enables the distribution box to adjust its height freely within a range from installation depth to the outside wall, which can be 20mm deep in the most. The newly added guide rail balance bar can keep solid the plate in a vertical, and installation.

4. Easy Identification

The unique clearly-printed display circuit breaker control makes the wiring structure clear, as well as easy connection, search and maintenance.

5. Sealed Connection

Earth and N are both connected in a sealed way, which fastens and beautifies the whole structure.

6. Automatic Opening

It adopts the new function of automatic opening and closing by pressing, which is easy and convenient.

Features of distribution box

1. Material :

- Cover, button ,board, tag slip: PC plastic
- Shell of terminal bar :PC plastic
- Base box:1.2MM cold plates with plastic coating
- Busbar:2.0MM cold plates with plastic coating

2. Color:

- Green+Yellow ; White+Yellow ; Green+Gray ; White+Gray Cream+Cream White +White

3. Installation Method:

- Inside

Los **interruptores termomagnéticos** están diseñados para interrumpir la corriente eléctrica de un circuito cuando ésta sobrepasa ciertos valores máximos. El dispositivo consta de dos partes: un electroimán y una lámina bimetálica. Ambas conectadas en serie y por las que circula la corriente que va hacia la carga.

Los interruptores termomagnéticos protegen la instalación eléctrica contra sobrecorrientes (sobrecargas y cortocircuitos).

CARACTERÍSTICAS

- Posee un ancho de ¾" de tipo enchufable. Este interruptor es compatible en tamaño con sus similares en el mercado.
- Los conductores principales están fabricados en Cobre.
- El modelado del material es Poliamida, el cual es retardante a la flama.
- Características de disparo: Curva C. Esta curva es utilizada para la protección de los circuitos (alumbrado y tomas de corriente) en aplicaciones generales.
- Corriente nominal: 10 A, 15 A, 20 A, 30 A, 40 A, 50 A y 60 A.
- Capacidad interruptiva: 10 kA.
- Desarrollado para su conexión en cables de Cobre o Aluminio del calibre 14 al calibre 4 AWG.
- Certificación: NOM ANCE
- Cuenta con indicador del estado de interrupción.
- Póliza de garantía: 2 años.

APLICACIONES

- Protección de circuitos derivados y alimentadores en instalaciones domésticas, comerciales e industriales.
- Instalación en centros de carga y tableros de alumbrado.
- Control y protección contra sobrecargas y cortocircuitos en una instalación monofásica (1 Polo).
- Protección contra sobrecargas y cortocircuitos en sistemas de distribución eléctrica de tipo domésticas, comerciales e industriales de 2 fases y 3 fases (2 Polos y 3 Polos).

INDICADOR DEL ESTADO DE INTERRUPCIÓN

Este interruptor tiene una ventana indicadora que muestra el estado de interrupción.

En **VERDE** indica que el interruptor está apagando (OFF / 0) por lo que no hay peligro para instalarlo o quitarlo del centro de carga.

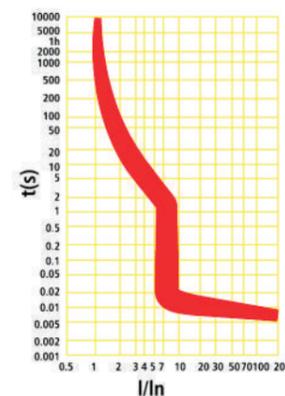

En **ROJO** señala que el interruptor está encendiendo (ON / I) e indica peligro. No es recomendable instalarlo o quitarlo del centro de carga ya que el interruptor está energizado.

Cuando el interruptor se dispara **LA MIRILLA CAMBIA DEL COLOR ROJO AL VERDE**, hay que mover la palanca **OFF-ON** para restablecer la energía.

ESTRUCTURA INTERNA

CURVA DE DISPARO

ESPECIFICACIONES TÉCNICAS			
Información general			
Normas de referencia	NMX-J-515-ANCE, NMX-J-569-ANCE y IEC/EN 60947-2		
Números de polos	1P, 2P y 3P		
Características de disparo	Curva C		
Corriente nominal In	10 A, 15 A, 20 A, 30 A, 40 A, 50 A y 60 A		
Frecuencia nominal	50/60 Hz		
Tensión nominal Ue	1 Polo: 120/240 VAC, 2 Polos: 120/240 VAC y 3 Polos: 240 VAC		
Tensión máxima de operación Umax	240 VAC		
Tensión mínima de operación	7 VAC		
Tensión nominal de aislamiento	Fase a tierra: 500 VAC Fase a fase: 500 VAC		
Capacidad nominal de cortocircuito Icn	10,000 A		
Corriente de capacidad interruptiva Icu	10,000 A		
Clase de energía limitante	3		
Categoría de sobretensión	2		
Grado de contaminación	2		
Resistencia nominal al impulso Uimp	4,000 V		
Tensión de prueba dieléctrica	1,500 V		
Tiempo de disparo a cortocircuito	5 In t≤0.1s No disparo 10 In t 0.1s Disparo		
Tiempo de disparo a sobrecarga	1.13 In, t≤1h, No disparo después le aplica 1.45 In, tiene que disparar dentro de 1h		
Temperatura de referencia para característica del disparo	30°C		
Resistencia (vida)	Mecánica: 20,000 veces		
	Eléctrica: 10,000 veces		
Datos mecánicos			
Material de la carcasa	Poliamida PA6		
Palanca	Poliamida PA66		
Indicación de posición de contacto	Marca en alternancia (ON / OFF 0)		
Grado de protección	IP20		
Resistencia al impacto	A 100 mm de altitud choca libremente el producto 10 veces con un péndulo dentro de 1 min. El producto no se puede dañar.		
Resistencia a las vibraciones	A 40 mm de altitud se cae el producto 50 veces en cada dirección (parte frontal, trasera, izquierda, derecha) y no se puede disparar.		
Condiciones ambientales	Con una temperatura máxima de 40°C la humedad relativa del aire no debe exceder del 50%. Se permite un nivel más alto de humedad relativa del aire a una temperatura más baja. Por ejemplo, en 20°C la humedad relativa puede ser del 90%.		
Temperatura ambiente	Operación: -5°C +40°C Almacenamiento: -25°C+70°C		
Material de los conductores principales (enchufable)	Cu		
Instalación			
Terminal	Lado línea: Conexión enchufable		
	Lado carga: Terminal con opresor		
Calibre de los conductores	Lado línea: Conexión enchufable		
	Lado carga: #14 - #4 AWG		
Par de apriete (torque)	31 lb in (3.5 N m)		
Posición de palanca	Apagado: OFF (0) Color de la bandera en VERDE		
	Encendido: ON (I) Color de la bandera en ROJO		
Dimensiones	1 Polo: (79×18×73) mm	2 Polos: (79×36×76.4) mm	3 Polos: (79×54×76.4) mm
Peso	1 Polo: 0.121kg	2 Polos: 0.243kg	3 Polos: 0.365kg
